

HIGHLIGHT FEATURES

SYNCHRO CONNECT

Synchro Connect is a system seamlessly integrates data from a various of data sources, encompassing diverse formats and types, cleansing and transforming it into high-quality data. This entire process is orchestrated through a flexible process framework.

OBJECTIVES

- Easy to troubleshoot data problems
- Deployment is fast
- Disaster Recovery in place for data
- Adding more new systems will be seamless
- Legacy system can be integrated with new systems

DATA INTEGRATION (FROM VARIOUS SOURCE)

Data integration is the process of combining data from multiple sources into a single, unified view. It involves collecting, cleaning, transforming, and loading data into a data warehouse or data lake.

DATA CLEANSING AND TRANSFORM

Data cleansing ensures accuracy by removing errors, while data transformation prepares data for analysis by structuring it for clear insights.

ORCHESTRATOR PROCESS

The data orchestrator process acts as a conductor, bringing together different data sets and preparing them for use by various applications and analysts.
